“Durable, high-quality, and cost-effective modular buildings for the mining and construction industries”

About Campac

- Privately-owned Australian company with over 20 years combined experience in the modular building industry
- We design, manufacture, and install modular buildings and villages across QLD and NSW including:
 - Mining construction and operation villages / camps
 - Plant site facilities and equipment shelters
 - Office, school, and laboratory complexes
 - Residential and employee accommodation
 - New homes
 - Park cabins
- ISO 9001:2000 Accreditation – exceptional products and Quality Management System
- AS/NZS 4801 Accreditation – effective Occupational Health and Safety Management systems
- 14001:2004 Environmental Management Standard - sustainable environmental management systems

***“Customer service, attention to detail,
on-time delivery, and turn-key solutions”***

Our Facilities

Campac now operates from a brand new state of the art factory production facility. Our premises allow of a production line assembly process, ensuring the strictest building timelines and quality control measures are adhered too.

***“Customer service, attention to detail,
on-time delivery, and turn-key solutions”***

Our Products

- Campac offer 2 different types of construction in our buildings

- EPS Panel construction

The benefits of EPS include

- ✓ **“Cool-room grade insulation”** High-grade insulation used as standard in all buildings (Up to W65 cyclonic loading; Up to 150mm EPS R4.2 roof)
- ✓ **“Greater comfort for site workforce. Lower power costs”** Panel core (EPS) is superior and more environmentally -friendly to FC sheeting and plasterboard. Less cooling and heating is required to create comfortable internal conditions reducing the running cost of the camp
- ✓ **“Won’t crack or splinter like ply wall or roof sheeting”** Low-maintenance and durable powder-coated walls will not crack or delaminate and do not require painting or repainting. Purpose-built to sustain on-site conditions

- Steel/Timber framed construction

Using steel or timber framing construction allows us to ...

- ✓ Offer a variety of different cladding options both internally and externally.
- ✓ Greater flexibility of design
- ✓ Achieve a traditional residential housing style

“We consider the products used in our manufacture are more ‘fit for purpose’ than other products supplied to the market”

Our Work

- Campac has successfully delivered a range of tailored solutions to meet difficult and unusual on-site conditions. Examples of recent projects include:
 - Thiess / QRI Services Camp at Coppabella – installation of 70 bunkhouses (210 person camp)
 - LBB JV Tunnel Project – installation of 112 buildings in four-storey construction (offices and ablutions) in space-restricted, high density conditions
 - Alstom Power Braemar Power Station – 55 offices, toilets, and lunchrooms delivered in a restricted timeframe of four weeks
 - MacMahons Hale Street Bridge – 42 buildings in two-storey construction. Industry-first for aesthetic design
 - Boulderstone Hornibrook RAAF Amberley – 20 offices with industry-first advanced fire and safety ratings

“We are focused on addressing difficult site conditions with flexible, problem-solving solutions”

About Campac – testimonials

“We have used Campac for many years and found them to be thoroughly professional. Their products are built to an exacting standard and their finishes are superb. We have no reservations in recommending them to prospective clients.”

Rob Taylor

Plant Administrator, Boulderstone Hornibrook

“Campac has been building quality, transportable buildings for Leighton Contractors Pty Limited for several years now. All costs and quotes are highly detailed and accurate. Projects have been very smooth with a high standard of finish.”

Neil Prickett

Branch Asset Controller, Leighton Contractors Pty Limited

“During a recent job, Campac has displayed professionalism in their approach and delivered in a timely manner.”

Frank de Nys

Procurement Officer, Thiess Sedgman Joint Venture
