- ☑ **Installation of stairs**
- ☑ **Transit Maintenance** - on site touch-ups to ensure you new home is in pristine condition
- ☑ **Final inspection** prior to handover
- ☑ **Handover of home**

Site Services Hookup

Our system provides you with a completed home ready for site services hook-up. By allowing customers to arrange their own electrician and plumber to hook-up the building, we help you save money as you can use local, rather than travelling tradespeople for this final process .

How It Works

1. **Documentation** - after the initial contract is signed we provide you with a working drawing, instructions and council forms so you can easily explain to your local plumber and electrician what is required.
2. **Estimate** - Your local plumber and electrician provide you with an estimate of costs - You can even shop around to ensure you are getting the best possible price.
3. **Return of forms** - Once you have selected your preferred plumber and electrician, they complete the forms we provide, and they are returned to us so we can complete the council application process. *(the Plumber will need to complete a drainage plan and a FORM 7, which are required for us to submit your building application to council)*
4. **Council Submission** - once we received the required documentation back from your plumber and electrician we then begin the council submission process.
5. **Council Approval** - Once approval is received we schedule the house for construction and provide you with an estimated delivery and installation date so you can tentatively book your plumber and electrician to hook-up your new home
6. **Construction** - we commence construction of your home in our factory
7. **Delivery and Installation** take place
8. **Hook-up** - You then arrange your plumber and electrician to hook-up your home.
9. **Council then inspect** and provides you with a certificate of occupancy
10. **TIME TO MOVE IN**
